FOR IMMEDIATE RELEASE

LINC CUSTOMER NAMED ONE OF HARVARD'S TOP 50 MOST INNOVATIVE GOVERNMENT PROGRAMS

*The City of Beaverton's Unique Central Plant Recognized for Creative and Efficient Approach
to Public Management*

Houston, TX — May 24, 2007 — Linc Facility Services[®], a leader in technology and high-value facility management services, is pleased to announce its customer — The City of Beaverton, Oregon — has been honored as one of the Top 50 Programs in the 2007 Innovations in American Government Awards competition. The competition is sponsored by Harvard University's John F. Kennedy School of Government.

The Top 50 Programs were selected from a pool of nearly 1,000 nominees representing all levels of government. Winning programs were chosen for their innovation, creativity, and effectiveness at addressing significant environmental and energy related issues, and their potential to be replicated by other jurisdictions.

The Beaverton Central Plant is a highly efficient heating and cooling system that provides the city's downtown businesses with cost-effective space conditioning and long-term pricing stability. The facility was designed specifically to promote energy efficiency and reduced environmental impact that

would be attractive to business owners and developers, and help with the revitalization of the downtown area (called the downtown Round initiative). The plant's unique service frees clients from the need to invest in heating and cooling capacity infrastructures within their buildings and allows tenants to more effectively manage and control their on-going utility expenses.

Linc Facility Services has been providing the City of Beaverton with comprehensive, technical facility management services for more than seven years. When the city purchased the central plant in 2005, Linc was on hand to provide the critical support component needed to ensure the success of the project. Because of the consistency and reliability provided by Linc overseeing the plant's day-to-day operations and their on-going involvement with the city's green initiative programs, the city is able to offer customers attractive pricing and unique efficiency benefits.

"Linc has played a very significant and important role in the development, expansion, and operations of the plant," Said Lonnie Dicus, plant manager. "They have been a trusted partner for us and have allowed us to achieve success not only with the plant, but with the downtown Round redevelopment project as well. We are honored to receive this award from Harvard and know that we would not have been recognized without the help and support of Linc."

"We are very proud to be part of Beaverton's great success with their energy initiatives and plan to help them take that success to the next level through continued expert facility management services and support," said Linc Facility Services President Phil Rogers.

About City of Beaverton

The City of Beaverton is located seven miles west of Portland, encompasses 18.6 square miles, and has a population of 83,097 residents. It is Oregon's fifth largest city and is the largest incorporated city in Washington County. For more information on the City of Beaverton's Central Plant and Downtown Round projects, visit www.beavertonoregon.gov/departments/centralplant.

About Linc Facility Services

Headquartered in Houston, Texas, Linc Facility Services is a business-to-business productivity partner and a leader in technology and high-value facility services. Since 1979, Linc has been delivering services to a diverse range of corporate, institutional, and government clients throughout the United States and around the world. Through a network of regional offices, Linc and its subsidiaries provide differentiated and innovative facility management solutions that drive quality, efficiency, and a reliable means to superior results. As a “partner in productivity” Linc’s goal is to deliver solutions that enable its clients — including airports, military installations, sports venues, financial institutions, healthcare facilities, and manufacturing plants — to save valuable time and money and operate at their highest levels of performance.
